OFFICE SYSTEMS LTD PRESENT:

PERFECT POSTURE

It makes all the difference - to health and productivity

To sit comfortably at your desk at work you need to have a combination of *sound posture* and *good blood circulation*. This depends on you being able to move your back and leg muscles frequently.

With our innovative PERFECT POSTURE Free Flowing Air Seating you can achieve this easily via air cushioning which *adapts and changes to your body's movements throughout your day* - just as if you were sitting on a gym ball.

The PERFECT POSTURE air system from Alliance provides you with more health benefits than standard lumbar support. Most people don't rest against the seat back all the time. But whenever you sit down you automatically have *all your weight on the seat*, so this is where you need a dynamic support solution - PERFECT POSTURE.

The magic is in the seat cushion. At the *push of a button* located just under the seat, air is allowed to flow through a two-way valve, then as the user moves position *the air is distributed to where support is required*: instantly. Once you are comfortable, release the button and the seat cushion will be just the way you want it - every time you sit down. *It's as simple as that.*

PERFECT POSTURE can be built into our **RSK, TSK, MSK, BIMP** and **3000** ranges, so if you want to make your next operator or task chair the most comfortable you've ever had, *if you want to be sure the cushion fits you as if it had been tailor-made*, give us a call and place your order today.
